

What Attend Systems Does For You:

- **Reduces your cost** of locating equipment, counting inventory & remotely managing moves and repairs.
- **Improves your change management** and service quality with fast and accurate location of assets.
- **Simplifies audits and compliance** with SOX, SAS 70/SSAE16, HIPAA, and the PCI Data Security Standard.
- **Automatically detects asset moves** and alerts you to equipment moves within and to/from your data centers.
- **Reduces your power cost** and alerts you to hot and cold spots before they become critical.
- **Improves your productivity** without increasing head count by eliminating labor intensive processes.

How we bring you all this and more:

In The Rack

The Attend InfraManager (AIM) is the only DCIM solution that automatically detects asset moves and updates records.

AIM reduces labor costs, improves change- and capacity management, and reduces energy costs.

As part of the data center infrastructure, AIM tracks and monitors rack equipment and delivers essential, real-time alerts and information, including automatic, 24/7, precise inventory and location data for each IT asset and rack level temperature data.

AIM delivers from Day One *without* the need for installing or configuring software, *without* upfront capital investments, and *with* simplicity: Plug-and-Play asset tags and controllers and Software as-a-Service—hosted in the Cloud or behind your firewall. Learn more at: attendsystems.com.
